EDUCATION

San Jose State University, San Jose, CA

August 2022 - May 2026

B.S, Software Engineering

GPA: 3.81/4

Relevant Coursework: Data Structures & Algorithms, Software Engineering, Database Management Systems, Computer Networks, Computer Architecture, Machine Learning, Operating Systems, Information Security

TECHNICAL SKILLS

Languages/Databases: Java, Python, JavaScript, TypeScript, HTML/CSS, MySQL, MongoDB, OracleDB, Redis

Frameworks/Libraries: React, Angular, Node.js, Vue.js, Spring Boot, Play, FastAPI, Flask, Tailwind, SCSS

Cloud/DevOps: AWS (S3, EC2, Lambda, DynamoDB, API Gateway, Rekognition), Elasticsearch, Docker, Git, Linux

Data/ML Libraries: NumPy, Pandas, TensorFlow, PyTorch, Scikit-learn, Transformers, Matplotlib

Testing: Pytest, Selenium, Jest, JUnit

EXPERIENCE

Lawrence Livermore National Laboratory

June 2026 – Present

Academic Graduate Appointee

- Building and maintaining features for a centralized infrastructure management platform using Angular, Play, and OracleDB, enabling Laboratory infrastructure teams to plan, execute, and schedule various project types.
- Engineering a data management module for 200+ operations and maintenance projects, improving data accessibility and expanding platform capabilities for internal stakeholders.

Lawrence Livermore National Laboratory

May 2025 – December 2025

Computing Intern

- Developed a secure data archival platform for classified and unclassified experimental test data, supporting the storage, search, and traceability of over 350,000 records for multiple teams.
- Enhanced UI and backend processes using TypeScript, Angular, FastAPI, and MongoDB, resulting in improved search performance and user experience.
- Accelerated bi-weekly transfer of 100GB data from unclassified to classified systems by optimizing document querying and processing, resulting in a 400% improvement in export speed.

Blackhawk Network

June 2024 – December 2024

Technology Intern

- Developed and deployed an AI-powered image recognition service for an E-Commerce platform to automatically flag inappropriate images, reducing manual review time and accelerating the gift-card workflow by 80%.
- Leveraged AWS Rekognition and Comprehend models for intelligent content analysis and generation, enhancing moderation accuracy and automating classification tasks.
- Created REST services with FastAPI for image uploads, metadata queries, and AI-driven content moderation, paired with a responsive React/TypeScript frontend for real-time visualization of classification results, improving moderator efficiency.

PROJECTS

Phisher Fisher | *Vue.js, Tailwind, Flask, Jupyter Notebook*

December 2024 – January 2025

- Designed an end-to-end ML pipeline for phishing detection, including data preprocessing, tokenization, and model training using DistilBERT on 12K+ samples, achieving 97.5% accuracy.
- Implemented REST APIs on Flask that deploy the model, enabling classification of user-inputted messages and retrieval of results with confidence scores.
- Built a Google Chrome extension using Vue.js and Tailwind CSS to process suspected messages and display AI-driven classification results, improving accessibility and user experience.

ACTIVITIES

Treasurer | Association for Computing Machinery (ACM)

August 2023 – May 2026

- Managed the annual budgeting process, monitored the club's financial sources and expenditures, and participated in weekly meetings with officers and advisors to debrief and coordinate upcoming events.
