EDUCATION

San Jose State University, San Jose, CA

Expected Graduation: May 2026

B.S, Software Engineering

GPA: 3.82/4

Relevant Coursework: Data Structures & Algorithms, Software Engineering, Database Management Systems, Computer Networks, Computer Architecture, Machine Learning, Operating Systems, Information Security

TECHNICAL SKILLS

Languages/Databases: Java, Python, JavaScript, HTML/CSS, TypeScript, C/C++, MySQL, MongoDB, Redis
Frameworks: React, Angular, Node.js, Vue.js, Tailwind, SCSS, FastAPI, Flask, Spring Boot, Elasticsearch, Selenium
Developer Tools: Git, AWS (S3, EC2, Lambda, DynamoDB, Rekognition, API Gateway), Linux, Unix, Docker, Figma
Libraries: Numpy, Tensorflow, Pandas, Transformers, Pytest, Torch, Sklearn, Matplotlib
Protocols: TCP/IP, UDP, HTTP/S, WiFi (IEEE 802.11), IPv4/6

EXPERIENCE

Lawrence Livermore National Laboratory

May 2025 – December 2025

Computing Intern

- Developed a secure data archival platform for classified and unclassified experimental test data, supporting the storage, search, and traceability of over 350,000 records for multiple teams.
- Enhanced UI and backend processes using TypeScript, Angular, FastAPI, and MongoDB, resulting in improved search performance and user experience.
- Accelerated bi-weekly transfer of 100GB data from unclassified to classified systems by optimizing document querying and processing, resulting in a 400% improvement in export speed.

Blackhawk Network

June 2024 – December 2024

Technology Intern

- Developed and deployed an AI-powered image recognition service for an E-Commerce platform to automatically flag inappropriate images, reducing manual review time and accelerating the gift-card workflow by 80%.
- Leveraged AWS Rekognition and Comprehend models for intelligent content analysis and generation, enhancing moderation accuracy and automating classification tasks.
- Implemented REST services using FastAPI for image uploads, metadata queries, moderation tracking, and AI-driven content workflows, ensuring robust and efficient operations.
- Built a responsive frontend using React and TypeScript for real-time visualization of classification results, improving moderator efficiency and transparency.

PROJECTS

Phisher Fisher | *Vue.js, Tailwind, Flask, Jupyter Notebook*

December 2024 – January 2025

- Designed an end-to-end ML pipeline for phishing detection, including data preprocessing, tokenization, and model training using DistilBERT on 12K+ samples, achieving 97.5% accuracy.
- Implemented REST APIs on Flask that deploy the model, enabling classification of user-inputted messages and retrieval of results with confidence scores.
- Built a Google Chrome extension using Vue.js and Tailwind CSS to process suspected messages and display AI-driven classification results, improving accessibility and user experience.

Recipe Radar | *React, CSS, Google Firebase, Firestore*

January 2024 – May 2024

- Developed a web application using React that generates personalized daily meal recipes based on user-inputted criteria such as dietary preferences, calorie limits, and restrictions.
- Integrated Spoonacular API to retrieve and display tailored recipes and Firestore to manage user authentication and securely store personalized preferences.

ACTIVITIES

Treasurer | Association for Computing Machinery (ACM)

August 2023 – Present

- Managed the annual budgeting process, monitor the club's financial sources and expenditures, and participate in weekly meetings with officers and advisors to debrief and coordinate upcoming events.
